Plan :

- Regular physical activity is important to maintain your function, decrease your risk for many medical conditions, protect your mind, and improve the duration and quality of your life.
- We recommend 30 min of aerobic exercise such as brisk walking 5x a week for heart health and general fitness. If you are unable to exercise for 30 minutes at a time, this can be broken up into 10 min of aerobic exercise 3 times a day. Those unable to do weight bearing exercise might try swimming or water aerobics.
- We recommend strength building activities of all major muscle groups 2x a week. This includes lifting weight, using resistance bands or carrying groceries. This should consist of 8-12 repetitions per activity.
- Ten minutes of stretching at least 2x a week is important for flexibility and continued mobility.
- For those at risk for falls, daily exercises like standing on one foot and then the other, walking heel to toe or

Staying healthy is an important part of getting older. Here are some ideas to improve your health. Your care team at UnityPoint Clinic can help you with any specific questions you may have. Your local Area Agency on Aging (AAA) can also provide referrals for experts, workshops, or resources in your area. To find your local AAA, visit the federal government's Eldercare Locator at www.eldercare.gov.

- **Diet:** Healthy eating includes lean proteins, fresh fruits, vegetables, and whole grains and cutting back on foods that have a lot of fat, salt, and sugar.
- **Water:** Talk to your doctor about how much water is safe for you to drink. Water keeps every part of your body working properly. It helps your body flush wastes and stay at the right temperature. It can help prevent kidney stones and constipation.
- **Exercise:** Staying active is good for your health. If you want to increase your level of activity talk with your doctor about what is safe for you. Walking is a good place to start for most people, start slow and increase by small amounts each week.
- **Sleep:** Sleep is important for your physical and emotional health. Sleep can help you stay healthy by keeping your immune system strong. Getting enough sleep can help your mood and make you feel less stressed. Having a bed time routine is helpful.
- **Home Safety:** Home safety is very important to prevent falls and maintain your independence. Regular upkeep of your home is an important part of staying healthy.

Based on today's Health Risks Assessment, we are making the following recommendations:
