Collected by: 10/10/18 1807 Resulting lab: GREENWICH HOSPITAL LABORATORY

0.26-0.5: Bacterial infection likely

>0.5: Bacterial infection highly likely

Consider reassessment of PCT within 6 to 24 hours in:

1. All patients in whom antibiotics are withheld but who show clinical deterioration
2. High risk patients with an initial PCT <0.25 ng/mL
In patients in whom antibiotics are initiated, PCT levels should be reassessed every 2 days until PCT decreases to <0.25 mg/L (or by at least 80% to 90% from the peak level).
Falsely high/low levels of PCT:
Falsely high PCT: Examples include severe SIRS and shock, ARDS, trauma, postoperative, tumor (eg, medullary thyroid cancer, SCLC), fungal, malaria
Falsely low PCT: Examples include parapneumonic effusion, loculated infection (empyema), early phase of infection, fungal, most severe immunosuppression
In addition, per the recent FDA Approval Procalcitonin values can be used to aid the decision for Initiation Antibiotic use in LRTI.

PCT Value Initiation of Antibiotic
(ng/mL) Use Recommendation

<0.10 Strongly Discouraged
0.10 - 0.25 Discourage
0.26 - 0.50 Encouraged
>0.50 Strongly Encouraged

Collected by: 10/10/18 1807 Resulting lab: GREENWICH HOSPITAL LABORATORY

0.26-0.5: Bacterial infection likely

>0.5: Bacterial infection highly likely

Consider reassessment of PCT within 6 to 24 hours in:

1. All patients in whom antibiotics are withheld but who show clinical deterioration

2. High risk patients with an initial PCT <0.25 ng/mL

In patients in whom antibiotics are initiated, PCT levels should be reassessed every 2 days until PCT decreases to <0.25

mg/L (or by at least 80% to 90% from the peak level).

Falsely high/low levels of PCT:

Falsely high PCT: Examples include severe SIRS and shock, ARDS, trauma, postoperative, tumor (eg, medullary thyroid

cancer, SCLC), fungal, malaria

Falsely low PCT: Examples include parapneumonic effusion, loculated infection (empyema), early phase of infection, fungal, most severe immunosuppression

In addition, per the recent FDA Approval Procalcitonin values can be used to aid the decision for Initiation Antibiotic use in LRTI.

PCT Value Initiation of Antibiotic
(ng/mL) Use Recommendation

<0.10 Strongly Discouraged
0.10 - 0.25 Discourage
0.26 - 0.50 Encouraged
>0.50 Strongly Encouraged
